Family Friendly Cinema

Please follow the steps below to get set up and learn how to remove swearing from videos.

Step 1 — Visit The Family Edit Center

The Family Edit Center is a website offering cleaned-up versions of films with swearing, violence, and nudity removed. Please note that it does not always remove all swearing — if you are concerned there may still be too much, you can follow the steps in Step 2 below to mute any remaining swear words yourself.

https://familyeditcenter.netlify.app

Click the link above, or copy and paste it into your browser's address bar.

Step 2 — Remove Further Swearing from Videos

To remove any remaining swearing from a video, follow these steps carefully:

First, download the Swear Muter folder here:

https://drive.google.com/drive/folders/1xOPwdm4gAfZ6Dw4PSE1QQks2oOdDEVBc?usp=sharing

1. Download the video from The Family Edit Center.

2. Split it into shorter segments of **under 30 seconds each** using the program **run-splitter.bat**.

3. Upload each segment to Turboscribe.ai for transcription. *(The free plan supports files up to 30 minutes.)*

4. Export each transcription as an **.srt** file.

5. Move all the original video files to a **separate folder** to keep things organised.

6. Move **one** short video segment and its corresponding **.srt file** into the **Swear Muter folder**. Run **swearmuter.bat** to mute the swearing in that segment. Repeat for each

remaining segment one by one.

■ *Important: The Swear Muter folder must contain only one video file and one .srt file at a time when running swearmuter.bat. Move all other video and .srt files out before running the program — note that the folder contains other files which should remain in place.*

7. Once all segments have been muted, move them all back into the **Swear Muter folder** (excluding the original full video downloaded in Step 1), then run **run_join.bat** to rejoin them into a single finished video.

Tip: Keep your files organised by naming folders clearly (e.g. "Originals", "Segments", "Muted") so you don't lose track of which files have been processed.
